

Say Good-Bye to Warped Sign Posts with...

# Sta-Rite

This aluminum sign post was designed as an improvement to our polyethylene post traditionally used for Impact Recovery Systems parking lot signage. Just like our other parking lot signage, these signs utilize our reactive spring unit which allows the sign to withstand bumper hits and return to original position, with minimal damaging to the sign and vehicle. Ideal for high traffic parking lot locations, these signs are especially useful for lots without car stops.

These highly durable, yet light weight signs, utilize a white powder coated aluminum post in order to prevent warping and remain straight, even in harsh summer and winter conditions. The aluminum sign post is available with an outer yellow bollard constructed of durable plastic which simulates a formidable concrete barrier for added conspicuity. The bollard also supplies additional protection in order to prevent damage to the post.

## Features:

- White powder coated aluminum post
- Available yellow plastic bollard
- Patented reactive spring unit
- Available sizes: 60", 78" or 102"

## Benefits:

- Lightweight
- Impactable
- Durable
- No warping
- Fully customizable
- Easy to install
